Dear Josh,

Most of the virus reprints are gone but I enclose what I have that seems at all relevant. The Handbuch article reviews things pretty well up to 1956.

Certainly the fundamental principles controlling design and data processing ought to be the same in the two fields. We have never described our gadgetry in detail in print but I think the similarities with what you want to do will be more general than particular.

Best regards

Bill

P.S. "Small Angle Scattering of X-Rays"
by A. Guinier - Wiley 1955

→ GUINIER has most of the basic theory, instrumentation & applications for the x-ray case
